

Cambustion Ltd. – Engineering Services Group

Cambustion Engineering Services provides research and development facilities and expertise to the automotive industry, specializing in exhaust emissions control. Cambustion's state-of-the-art engine and vehicle test facilities are based in Cambridge.

Automotive Research Engineering Placement Student - 12 Months – Summer 2019

We have run several successful placements in the past and we are looking for a student to join our team for 12 months from summer 2019.

The day to day activities will be similar to those of our graduate engineers. You will have the opportunity to work on challenging emissions-based projects for customers including vehicle manufacturers and major suppliers to the automotive industry.

Projects typically centre on our high-technology engine and vehicle test facilities and involve developing software and hardware solutions to the latest emissions challenges.

This is a hands-on role and a successful applicant would be expected to take broad responsibilities including:

- Working with Senior Engineers to formulate work programs
- Operation of complex engine and vehicle test facilities
- Analysis of data and reporting
- Presentation of results

We can adjust the work content to suit any particular requirements of your course.

Applicants will ideally be studying either mechanical or automotive engineering, and have an interest in and preferably practical experience of internal combustion engines.

The salary for placement students will be £17,000 per year. They will also join our profit sharing scheme which is variable but typically worth an additional 10% per year.

If you are interested please e-mail your CV and a covering letter to jobs@cambustion.com, ideally before 31st March 2019.
